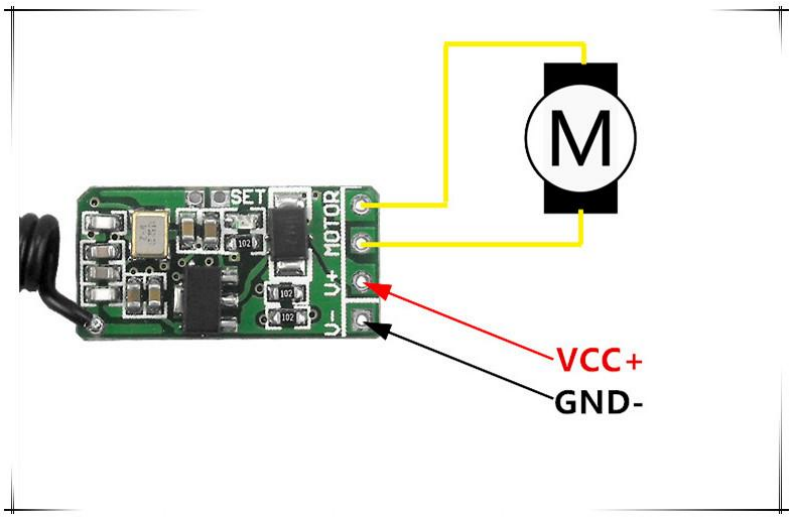
RF 433mhz Remote Control Switch DC3v to 12v Motor Coil Forward and Reverse Controller Transmitter +Receiver

Item specifics
Package:YesFrequency:433 MHz
Channel:1Model
Use:Universal
Power supply module:DC3v to 12v
Module consumption:standby 0.01mA working 6mA
Remote control frequency:433mhz
Module size:0.79inch*0.40inch*0.16inch
Control distance:20meters open environment, can through walls
remote control size :2.41inch*1.12inch*0.48inch
remote control button:2 button
The customer diy:Suitable for the customer DIY
Module function:Forward and reverse
remote material:Black plastic

Product Description
1.360 degree,NO dead Angle
2.RF Remote Control Switch,can through walls
3.Ultra low power,Suitable for battery
4.Super small size,Factory direct sale
5.Independent coding, many sets will be not interference of each other
6.If need more set of general,please descr

Product scope
The EMIFIL circular coil，coil，motor，electromagnet，The positive and negative switch with each other
Product parameters
working voltage:DC3v to 12v
power current: standby 0.01mA, working 6mA
Remote control frequency:433mhz
Input voltage=output voltage
Load: Less than 400mA(Less than 4 watts of equipment)
Magnetic induction coil current large equipment, Module will automatically over-current protection, Can only work for 1s
Module size:0.79inch*0.40inch*0.16inch
REMOTE SIZE:2.41inch*1.12inch*0.48inch
Control Distance: open environment 20M,can through the walls



Usage mode
Reference to connection, connect the power supply for correctly, use the remote control motors
Press "A "button, the motor foreward, Loosen "A" button, Motor stopped.
Press "B" button,the motor inversion,Loosen "B" button,Motor stopped
Please don't hold control "A "and "B" button at the same time
Module programs use sleep mode, Its low power consumption, Suitable for batteries
For the opportunity to automatically into low power consumption state of dormancy，So when they use 1 s delay.

Performance reference
1. output voltage=The input power supply voltage
2. when you use, Module will be a bit hot, That is normal, Don’t worry
3. Control module with over-current protection, Starting current is less than 400mA, normal use
4. starting current is larger with motor, Instant power will be closed 1 times
5. More than a limited amount of current, Will be power-off protection.
6. The magnetic induction coil current is the largest state in general, So there will be blackout. Power is equal to the job 1s.
7. Dormancy program, Their basic don’t Consumption of electricityelectricity
8. Is the positive/negative switching outputs, Can only use the remote control output and positive negative conversion.
