

## RF 1CH Super Power Remote Control Switch DC3v to 12v Motor Forward and reverse Transmitter

### Learning Code Receiver

Item specifics

Package:YesFrequency:433 MHz

Channel:1Model

Use:Universal

Power supply module:DC3v to 12v

Module consumption:standby 0.01mA working 6mA

Remote control frequency:433mhz

Module size:0.79inch\*0.40inch\*0.16inch

Control distance:200meters open environment, can through walls

remote control size :2.41inch\*1.12inch\*0.48inch

remote control button:2 button

The customer diy:Suitable for the customer DIY

Module function:Forward and reverse

remote material:Black plastic

#### Product Description

- 1.360 degree,NO dead Angle
- 2.RF Remote Control Switch,can through walls
- 3.Ultra low power,Suitable for battery
- 4.Super small size,Factory direct sale
- 5.Independent coding, many sets will be not interference of each other
- 6.If need more set of general,please descr

#### Product scope

The EMIFIL circular coil, coil, motor, electromagnet, The positive and negative switch with each other

Product parameters

working voltage:DC3v to 12v

power current: standby 0.01mA, working 6mA

Remote control frequency:433mhz

Input voltage=output voltage

Load: Less than 400mA(Less than 4 watts of equipment)

Magnetic induction coil current large equipment, Module will automatically over-current protection, Can only work for 1s

Module size:0.79inch\*0.40inch\*0.16inch

REMOTE SIZE:2.41inch\*1.12inch\*0.48inch

Control Distance: open environment 20M,can through the walls

#### Usage mode

Reference to connection, connect the power supply for correctly, use the remote control motors

Press "A" button, the motor forward, Loosen "A" button, Motor stopped.

Press "B" button, the motor inversion, Loosen "B" button, Motor stopped

Please don't hold control "A" and "B" button at the same time

Module programs use sleep mode, Its low power consumption, Suitable for batteries

For the opportunity to automatically into low power consumption state of dormancy, So when they use 1 s delay.

#### Performance reference

1. output voltage=The input power supply voltage

2. when you use, Module will be a bit hot, That is normal, Don't worry

3. Control module with over-current protection, Starting current is less than 400mA, normal use

4. starting current is larger with motor, Instant power will be closed 1 times

5. More than a limited amount of current, Will be power-off protection.

6. The magnetic induction coil current is the largest state in general, So there will be blackout. Power is equal to the job 1s.

7. Dormancy program, Their basic don't Consumption of electricityelectricity

8. Is the positive/negative switching outputs, Can only use the remote control output and positive negative conversion.
